**NATURAL RESOURCES AND
THEIR MANAGEMENT**

K. A. Armson

To a significant extent, the well-being of Canada's economy is founded on the utilization of its natural resources. Therefore, to a very large degree, the continuation and development of this economy is based on the wise management of these resources, many of which are renewable.

Currently, such topics as air and water pollution are of concern to many, but an understanding of the problems of pollution with a view to their solution can only be achieved by a basic knowledge of the resource itself.

The increasing rate of urbanization results not only in increasing pollution and misuse of resources, but also in an ever greater proportion of the country's population living and working in environments where they are divorced from a first-hand knowledge and understanding of the resources which are the foundation of their own economic state.

Land, air and water resources will be discussed. The management of these for food production, forestry, mining, fish, wildlife and recreation will be illustrated, largely with reference to Ontario.

Text: A list of suggested readings will be sent to registrants.

Time: Thursdays, 8:00-10:00 p.m., November 5 to December 10/70; January 14 to February 18/71

Place: University College

Fee: \$55.00 — 12 sessions

(Offered in co-operation with the Ontario Forestry Association)

COURSE

Mr. _____
Mrs. _____
Miss _____
